At this point in time ColorKote coating does not have qualities or procedures that can pertain towards accruing a full LEED point as a product, on it's own.

However, if the job site is located within a 500 mile radius of ColorKote, located in Stratford, CT 06615, then this product can be submitted towards obtaining the LEED point for regional resources. The final stages of manufacturing due occur at this location.

The glass we purchase and apply the coating to has no value toward LEED points. ColorKote is working towards finding ways to make our product more valuable for LEED standards. The coating is low VOC (volatile organic compounds) and water based. It passes all federal standards for the clean water act.

Any questions please feel free to contact us at anytime.

Nicole Olson

Owner, ColorKote

The coating is sprayed in the facility located in Stratford, CT. The glass is cut from manufacturers located within 150 miles of our shop. The

glass itself in full sheet form and the coating material is purchased from companies that are an excess of 500 miles away.
